## CONCRETE SEALING & RESEALING

Cleaning your concrete periodically and keeping it sealed with the right concrete sealers are the key components of any good maintenance program.

Concrete that receives heavy traffic and frequent exposure to water and deicing chemicals may need to be resealed more often.

Sealers make the concrete easier to clean and prevent color fading from UV exposure. Stamped concrete should be resealed every 2 to 3 years, depending on your weather conditions

If you have a big area to maintain or simply don't want to tackle the work yourself, ESPJ Construction can help you maintain your stamped concrete and keep it looking like new for many years to come.
